DETAILED ACTION

Status of the Application

Receipt of the Request for Continued Examination (RCE) under 37 C.F.R. 1.114, Applicant's Amendment, Remarks/Arguments and the request for extension of time (1 month-granted), all filed 04/27/05 is acknowledged.

This application is in condition for allowance except for the presence of claims 32-59 drawn to an invention non-elected without traverse. Accordingly, claims 32-59 have been cancelled.

Claims 1-6, 8-30 and 60-64 are pending. Claims 1-6, 8-30 and 60-63 have been amended. Claim 31 has been cancelled (Examiner acknowledges Applicant's right to prosecute subject matter of the cancelled claim in related application(s)). Claims 32-59 have been cancelled by Examiner's Amendment. Claims 1-6, 8-30 and 60-64 are allowed.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/27/05 has been entered.

EXAMINER'S AMENDMENT

The application has been amended as follows:

In the Claims:

Claims 32-59 have been cancelled.

Allowable Subject Matter

Claims 1-6, 8-30 and 60-64 are allowed.

The following is an examiner's statement of reasons for allowance:

The primary reasons for allowance are that the prior art (Arm *et al.* WO 93/20859; Bates *et al.* US 6,530,951 B1; Eitenmuller *et al.* US 4,610,692 ; Healy *et al.* US 5,670,161) do not disclose nor fairly suggest an implant comprising a varnish-like coating having a thickness of 100 μm or less and made of a biodegradable polymer having a mean molecular weight of 100 kDa or less, wherein the varnish-like coating forms an adhesive bond to the surface of the implant. The 'varnish-like coating' of the instant invention is an improvement over prior art formulations because the varnish-like coating provides for a coating that bonds with the surface of the base material of an implant with enough adhesive strength such that, when the implant is implanted, mechanical friction will not abrade or otherwise damage the coating. It is this adhesive strength that ensures the coating is not degraded during insertion of the implant into the body. The prior art also fails to teach a varnish-like coating that is made by mixing a biodegradable polymer with an organic solvent to form a dispersion, applying the dispersion on a surface of the implant and then evaporating the organic solvent. In contrast, the prior art teaches

prefabricated films, such as those taught by Arm *et al.* (WO '859), for example. The instant implant promotes acceleration of the healing process for treating pathological changes or conditions in the spinal column and/or locomotor system and thus demonstrates an improvement over prior art formulations. Accordingly, the instant invention is rendered non-obvious and patentable over the cited art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
